

Versatile hopper car protection for the rail market

Rail coating solutions from International® deliver industry leading protection with proven performance backed by testing and real world in-field data. International® offers solutions designed to meet FDA requirements, while providing the flexibility to protect both cargo and cars from contamination and corrosion.

Coating solutions that keep you on track

Solutions focused for rail car owners, builders and lessors who need their hopper cars lined with coatings to preserve the food grade purity of their cargo. Our linings products are designed to bring additional flexibility and adhesion to the coating therefore greatly reducing the chance of failure.

Delivering both proven products and unrivaled technical expertise

By understanding the evolving needs of the rail market, International® continues to develop innovative coating solutions that help overcome industry challenges. Delivering linings with excellent edge retentive properties and their low surface energy allows enhanced cargo release properties, to novel technologies allowing protection against the most caustic and aggressive chemicals.

Versatility to meet your specification needs

Our portfolio of FDA-compliant lining solutions is designed to meet a wide range of hopper car requirements. Featuring ultra-high solids, low VOCs and zero HAPs, these linings protect rail hopper cars transporting liquid cargoes and dry bulk products. From fast-dry technologies to BPA-free linings and solutions for biofuel feedstocks, we have the right solution for your application.

Backed by extensive global experience and unrivalled coatings and corrosion expertise, International® provides specification support and technical services to help deliver reliable, long-term protection for your railcar assets.
