

Delivering aesthetics, productivity and performance for rail car exteriors

Rail coating solutions from International® provide long-lasting exterior protection, helping keep your assets protected for longer while reducing maintenance requirements. Designed for application efficiency, our coatings help maximize productivity and reduce time in the shop, keeping your fleet operational for longer.

Complete rail car protection, inside and out

Backed by rigorous testing and proven field performance, International® coatings are designed to meet the demanding standards of the rail industry.

International® protective coatings deliver high chemical resistance and durable, long-lasting protection for both new rail car construction and fleet maintenance applications. By helping to reduce maintenance requirements and extend asset life, they support reliable performance across a wide range of service conditions.

- Epoxy technologies
- Polyurethanes finishes
- Polysiloxanes finishes
- Polyaspartics finishes

Coatings that protect asset and reputation

Offering excellent UV and chemical splash resistance, International® exterior coating solutions deliver a uniform film build across both broad surfaces and sharp edges. This helps protect rail car assets from premature corrosion, preventing rust staining and maintaining the appearance of railcars throughout their service life.
