

Rail tank car linings for chemical cargo protection

International® rail lining solutions are designed to withstand a wide range of chemicals and operating conditions, helping protect both rail cars and their cargo.

Chemical protection tailored to your needs

Backed by rigorous testing and proven field performance, International® coatings are designed to meet the demanding requirements of the rail industry. Offering high chemical resistance and long service life, our solutions help protect rail assets while reducing ongoing maintenance requirements.

Ceilcote

Vinyl ester and novolac vinyl ester resin-based lining solutions designed to withstand highly aggressive chemical environments. These proven systems help protect rail tank cars and their cargo, supporting safe chemical transport and long-term asset integrity.

Interline

Epoxy based tank lining systems with over 40 years track record of lining steel storage tanks across the world, carrying a wide range of certifications and specifications across the oil, gas and chemical markets.

Enviroline

Specialist systems in high temperature resistant epoxy novolac linings products offering cost reduction to the rail market due to quick return to service times and winter cure grades.

Backed by extensive industry knowledge and expertise, International® can recommend the right lining technology for your application, helping protect both the integrity of your chemical cargoes and the long-term performance of your rail tank cars.
